

# Introduction to System Analysis & Design

---

LECTURE 02

MR. ALFRED EDWIN WORTHINGTON

# Learning Outcomes

---

End of this lecture you will be able to learn ,

- **LO1: Demonstrate an understanding of the principles of systems analysis and design and their importance for system development.**
- **LO2: Describe the role of the system analyst in the process of systems analysis and design.**

# Content

---

- What is System Analysis and Design?
- Purpose of System Analysis and Design
- Role of System Analyst
- Skills required for a System Analyst
- Who are Stakeholders?
- Information System Stakeholders

*Let's play a  
game!*

# Rules to Play

---

- Divide into teams of three.
- One student from a team comes to the front and chooses a word from the basket.
- Acts out the word or draw a picture on the board to explain the word.
- The team guessed out the correct word first, earns a point.
- The team which has the highest points at the end, is the “WINNER”

# System Analysis

---

Process of

- **collecting and interpreting facts**
- **identifying the problems**
- **decomposing system into its components.**

To identify system's objectives.

Improves the system

Ensures that all the components of the system work efficiently to accomplish their purpose.

**Analysis specifies what the system should do.**

# System Design

---

Process of

- planning a new business system or
- replacing an existing system by defining its components or modules to satisfy the specific requirements.

**Design focuses on how to accomplish the objective of the system.**

# System Analysis & Design

---

System Analysis and Design (SAD) mainly focuses on:

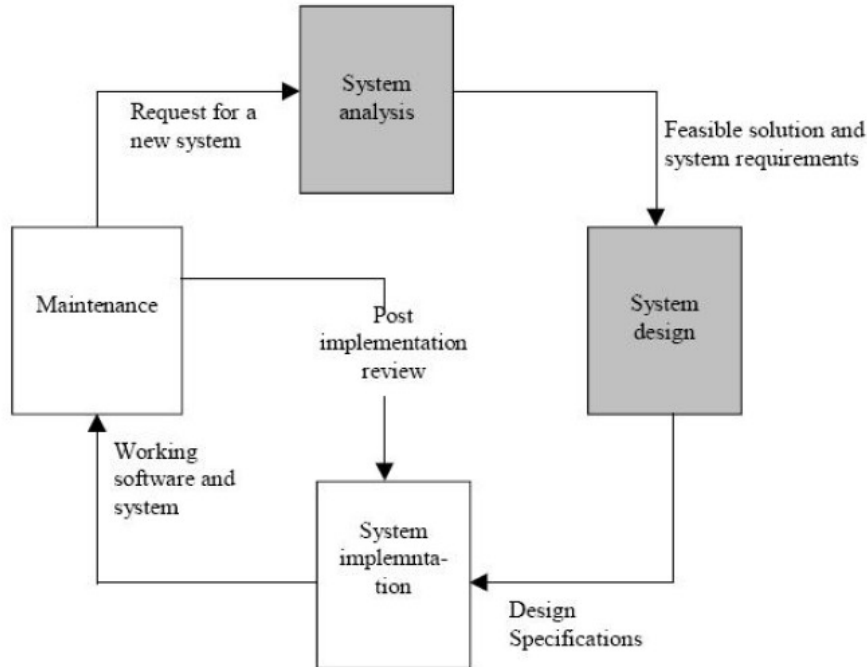

- Systems
- Processes
- Technology

# Stages in Building an Improved System

---

- ✓ **Systems analysis and design** is a step-by-step process for developing high-quality information systems.
- ✓ These information systems can be :
  - Used internally within the organization
  - Sold commercially via mail/web order or retail store
  - embedded in products

# What makes Systems Analysis & Design a difficult activity?

---

- Problem domains are dynamic.
- Requires interdisciplinary knowledge and skills.
- Systems Analyst's knowledge base is continually expanding.
- Technology evolves.
- Working with people.

# Who is System Analyst?

---

- The person who studies the problems and needs of a system and looks for improvement opportunities.

# Who is a Business Analyst?

---

A **business analyst** is a systems analyst who specializes in business problem analysis and focuses on business context system development.

# What does a Systems Analyst do?

---

- Studies the problems and needs of an organization looking for improvement

opportunities for:

- **increasing revenue/profit**
- **decreasing costs**
- **improving quality of service**

# Role of System Analyst

---

Key role in developing information systems

1

Analyzing the business situation

2

Identifying opportunities for improvements

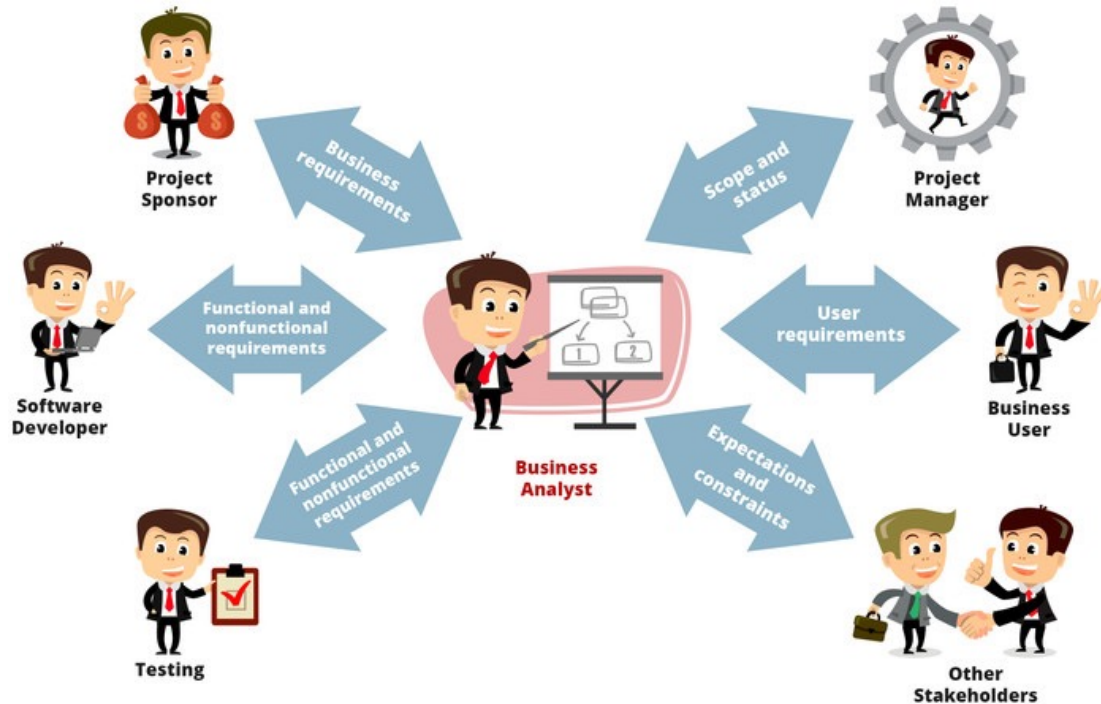

3

Designing an information system to implement the improvements

4

Interacting with Technical specialists (DBAs, network admins, programmers), Business people (users, managers, steering committee), vendors and consultants.

# Role of System Analyst

# Skills required for a System Analyst

---

- Working knowledge of information technology
- Computer programming experience & expertise
- General business knowledge
- Problem-solving skills
- Interpersonal communication skills
- Flexibility and adaptability
- Character and ethics

when your lecturer asks if you have  
any questions

UNIVERSITYSTUDENT.org

# Who are Stakeholders?

---

A person, group or organization that has interest or concern in the Information System.

# Information System Stakeholders

---

## System Sponsors

- Pay for the system to be built and maintained.
- Provide that justification for the system and determine policies for its use.
- May also be system users.
- Generally come from the ranks of executives or managers.

# Information System Stakeholders

---

## **System Users**

- Actually use the system on a regular basis to support the operation and management of the organization.
- Systems users come from all levels of the organization.

# Information System Stakeholders

---

## **System Analysts**

- Determine the requirements that must be met by the system to meets the needs of the customers, sponsors, and users.

## **Systems Designers**

- Technical specialists who select appropriate technologies and may the essential requirements into practical requirements.

## **System Builders**

- Technical specialists who build, test, and deliver the system.

# Thank you!

---

# Summary

---

- What is System Analysis and Design?
- Purpose of System Analysis and Design
- Role of System Analyst
- Skills required for a System Analyst
- Who are Stakeholders?
- Information System Stakeholders
